

1.0/2.3 Connector Series

The 1.0/2.3 connectors are miniature size, 50 Ohm impedance connectors with threaded coupling mechanism which provide positive mating. They are very compact and usually use in communication products which space is limited.

Between Series Coaxial Adapters

The adapters provide a convenient method for inner-connecting two different series or size connectors. These precision adapters offer a low VSWR, and are ideal for both measurement and systems use. Change over from plugs to jacks in either cable to cable or panel mount is achieved quick and easy. Several types are available as standard products and also for special applications as specified.
